## PowerShares FTSE<sup>™</sup> RAFI Utilities Sector Portfolio

PowerShares Capital Management LLC is passionate about our goal of delivering the highest quality investment management available through the replication of intelligent indexes in one of the more benefit rich investment vehicles, the exchange-traded fund.

PowerShares provides institutional caliber asset management through the replication of enhanced indexes. These indexes derive their investment decisions from methodologies that incorporate technically advanced and robust institutional investment research.

The PowerShares FTSE<sup>™</sup> RAFI Utilities Sector Portfolio is based on the FTSE<sup>™</sup>

Research Affiliates Fundamentals Utilities Sector Index. The Index is designed to track the performance of the largest U.S. utilities equities, selected based on the following four fundamental measures of firm size: book value, income, sales and dividends. The U.S. utilities equities with the highest fundamental strength are weighted by their fundamental scores. The fundamentally weighted portfolio is rebalanced and reconstituted annually.

Shares are ETF investments and have risks similar to stocks, including the possible loss of money. Ordinary brokerage commissions apply.

Anticipated Fund Inception: September 21, 2006

Performance data quoted represents past performance. Past performance is not a guarantee of future results, and current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate, and Shares, when redeemed, may be worth more or less than their original cost. The Shares' performance reflects fee waivers, absent which, performance would have been lower. See powershares.com to find the most recent month-end performance numbers. After Tax Held represents total return after taxes on distributions and assumes Shares have not been sold. After Tax Sold represents total return after taxes on distributions and the sale of Fund Shares.

The Index performance results are hypothetical; Index returns do not represent Fund returns. An investor cannot invest directly in an index. The Index does not charge management fees or brokerage expenses, and no such fees or expenses were deducted from the hypothetical performance shown nor does the Index lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

<sup>+</sup>The S&P Utilities Index and Dow Jones Utilities Index are unmanaged indexes used as a measurement of change in stock market conditions based on the average performance of approximately 31 and 90 common stocks, respectively.

| 2005    | 10.99  | 12.76                      | 11.42                     |
| 2006YTD | 5.05   | 2.59                       | 3.22                      |

## Index Market-Cap Allocations (%)

|                  |       |
|------------------|-------|
| Large-Cap Growth | 0.00  |
| Large-Cap Value  | 43.19 |
| Mid-Cap Growth   | 6.05  |
| Mid-Cap Value    | 42.64 |
| Small-Cap Growth | 1.18  |
| Small-Cap Value  | 6.95  |

## Index Category Allocations (%)

|                  |       |
|------------------|-------|
| Electricity      | 70.83 |
| Multiutilities   | 18.30 |
| Gas Distribution | 10.43 |
| Water            | 0.44  |

Index performance does not represent Fund performance. An investor can not invest directly in an index. Earliest available performance data begins in 2000.

<sup>Ü</sup> Volatility is the annualized standard deviation of monthly index returns. Beta is a measure of relative risk and is the slope of regression. Sharpe is the risk adjusted return and is the return less the risk free rate divided by the standard deviation. Correlation is the similarity in performance. Average Stock Price to Book Value is the ratio of a stock's market price to a company's net asset value. Return on Equity is net income divided by net worth. Average Market Capitalization is the average of each company's market value.

<sup>#</sup> The weighted costs excluded from the 0.60% expense cap include: legal fees pertaining to the Fund's shares offered for sale, SEC and state registration fees, initial fees paid to be listed on an exchange and sub-licensing fees.

There are risks involved with investing in ETFs, including the possible loss of money. The Fund is not actively managed and is subject to risk similar to stocks, including those related to short selling and margin maintenance. Shares are subject to risks including: Small and Medium-Sized Company Risk- investing in securities of small and medium-sized companies involves greater risk than is customarily associated with investing in more established companies. Shares are not FDIC insured, may lose value and have no bank guarantee.

**The Fund is concentrated in a single sector which involves substantially greater risk of loss and price fluctuations than an investment diversified across multiple industries or sector segments.**
