## 1. Overview

The Options Clearing Trade Interface (CTI) is a direct data product offered by Nasdaq for the following option exchanges:

- Nasdaq ISE (ISE)
- Nasdaq GEMX (GEMX)
- Nasdaq MRX (MRX)

CTI sends the following messages:

- Clearing trades, trade corrections and trade cancels on a low latency, real-time basis. – Routed to a given firm's connection based on:
  - Clearing Member Trade Agreement (CMTA) or Options Clearing Corp. (OCC) Number and/or
  - Exchange Badge or House Number and/or
  - Exchange Internal Firm Identifier (IFI)
- Optional administrative messages:
  - Options directory messages to relay option symbol and contract information for those options traded on the exchange.
  - Complex Order Strategy Messages to relay information for those strategies traded on the exchange (available for ISE). The Strategy Message lists the legs which compose the Strategy and the leg ratios which uniquely define this Strategy for an underlying.
  - Trading action messages to inform market participants when a specific option or strategy is halted or released for trading on the exchange.

## 2. Architecture

### 2.1. Network protocol

Messages are transported using [SoupBinTCP v3.00](#) on top of TCP/IP.

### 2.2. Connection

Due to scaled nature of the exchange system and need to minimize latency, connecting firms need to support at least one direct connection to each exchange subsystem where trades can come from.

| Connection type | Number of instances | Description  |
|-----------------|---------------------|--|
| Matching system | multiple            | Matching system is scaled into multiple independent "rings" with each ring generating trades for a specified range of options. Option directory and complex strategy messages can be used to determine what options and complex strategies are served by a given subsystem.  |
| Routing system  | 1                   | <p>A separate system (routing ring) reports trades routed to and executed at away markets. In addition to away market trades, only option directory messages are sent down to connecting firms on this connection. Since there is one routing ring, the list of options sent down this connection consists of all options traded at the exchange. Trade corrections and trade cancels for away trades are not sent on this connection. They come on one of the connections from matching rings (see above) based on the option assignment.</p> <p>For ISE, GEMX and MRX, routed trades will be sent over the same connection as that of the matching system. There will not be any need to receive routed trades over a separate connection.</p> |

ISE, GEMX and MRX will have one connection to match ring for each exchange.

## 2.3. Failover

Message gaps due to short connection losses are easily recovered by reconnecting to the exchange with the last sequence number processed by the firm before disconnect. SoupBinTCP supports a store on the exchange side where it keeps all messages for a trading session sorted by sequence numbers regardless of the client's connection state. SoupBinTCP will send all sequenced messages starting with the sequence number requested by the firm upon login.

Upon certain failures CTI may be restarted. None of the trades are going to be lost. All messages in the CTI message store will be recreated. Trades, trade corrections and cancels will be marked as "possible duplicates". After recovery if firms reconnect with sequence number 1, they should be ready to process "possible duplicates" accordingly.

In the event of catastrophic issues, the whole exchange system may be restarted in the middle of the trading day (intraday session roll-over). In this case, a new SoupBinTCP session will be started. The CTI message store will be empty and not have trades/etc. from the previous session. Firms have to login with sequence number 1. Trade ids are guaranteed to be unique across sessions for the same trading day.

## 2.4. Backup

For each connection block, the exchange provides a backup with connections that have the same subscription and port as the primary connection block but different IP addresses.

If there is a physical problem with one of the primary connections, firms can switch to the corresponding backup connection immediately. There is one backup connection for each primary connection. For smooth transition, it is recommended to login to the backup connection with the last sequence number received on the primary connection before it went down.

If there is a physical problem with the whole datacenter which affects all connections and the problem is not going to be fixed until next day, firms have to be ready to connect to the disaster recovery site on the next day.

## 3. Subscription

Firms can configure their connections (each connection block separately) to route trade related messages based on the following match criteria (entitlements):

- OCC clearing number(s), and/or

- CMTA and/or

- Exchange badge(s) (house number + suffix,), and/or

- Exchange house number(s) (used by PHLX specialists and order providers) and/or

- IFI (exchange internal firm identifier which describes a group of exchange badges or/and houses)

"Excluding" logic is not supported. For example, "send all trades for OCC number 123 to a given connection block" is a valid configuration while "...except trades for badge 789-A" is not. Trade routing by firm names is not supported at this time either.

If an order provider supplies a CMTA number, CMTA number will be used for routing decisions instead of the order provider's default OCC clearing number. Firms can now optionally elect thru subscriber services to route trades based on the order provider's original OCC clearing number (give-up) when a CMTA is supplied.

By default, all non-trade related messages (events, options, strategies, and trading actions) are routed to the firms unconditionally. It is possible to request configuring firms' connections for sending only trade related messages without any events, options, strategies, and trading actions.

## 4. Exchange Specific Messages

Firms connecting to ISE, GEMX and MRX options market will see all message types and field values described in the document related to the following functionality:

- Block Auctions
- Facilitation Auctions
- Complex Facilitation Auctions
- Solicitation Auctions
- Complex Solicitation Auctions
- Complex Exposure Auctions
- PIM Auctions (Price improvement auction on ISE Options Market)
- Complex PIM Auctions
- QCC orders (Qualified Contingent Cross)
- Customer to Customer Cross

Firms connecting to GEMX Options Exchanges will see all message types and field values described in the document related to the following functionality:

- Block Auctions
- Facilitation Auctions
- Solicitation Auctions
- PIM Auctions (Price improvement auction)
- QCC orders (Qualified Contingent Cross)
- Customer to Customer Cross

## 5. Messages

CTI will support three basic types of messages:

- System Events
- Administrative Data
- Trade related information

A firm can request configuring its lines to send only trade related information. All integer fields are unsigned big-endian (network byte order) binary numbers. All alphanumeric fields are left justified and padded on the right with spaces.

Trade Prices are long fields. When converted to a decimal format, prices are in fixed point format with 13 whole number places followed by 6 decimal digits. So price 1.3 will be a long number with value of 1300000.

All other price fields are integer. When converted to a decimal format, prices are in fixed point format with 13 whole number places followed by 4 decimal digits. So price 1.3 will be a long number with value of 13000.

Each message has a time located at offset 1 (Seconds, Nanoseconds). This time reflects the time when the message was created by the system not sent out. If firms connecting to CTI request to resend the message on reconnect, the message time will not change. "Seconds" is the number of whole seconds after midnight of the day and "Nanoseconds" is the remaining sub-second portion of the time. The "Seconds" field will have a range of 0 to 86400 (i.e. 12:00:00am to 11:59:60pm (Leap second)) and "Nanoseconds" will have a range of 0 to 999999999. All times in this protocol are U.S. Eastern Time zone.

Each message has a 1byte version number at offset 9 indicating current CTI message version. Version number is decoded as Mn, where M is major version and n is minor version. For example, CTI version 2.0 will be sent as 20, 1.3 will be sent as 13.

## 5.1. System Event

The system event message is used to signal a ring wide event.

| Name         | Offset | Size | Value   | Notes                             |
|--------------|--------|------|---------|-----------------------------------|
| Message type | 0      | 1    | "S"     | System event message              |
| Seconds      | 1      | 4    | Integer | Seconds portion of timestamp      |
| Nanoseconds  | 5      | 4    | Integer | Nanoseconds portion of timestamp  |
| Version      | 9      | 1    | Integer | CTI version (currently set to 21) |
| Event code   | 10     | 1    | Alpha   | Refer to System Event Codes below |

| Event Code | Explanation   | When (typically) |
|------------|---|------------------|
| "O"        | Start of Messages. This is always the first message sent in any trading day.  | After ~4:00am    |
| "S"        | Start of System Hours. This message indicates that the exchange is ready to start accepting orders.   | 7:00am           |
| "Q"        | Start of Opening Process. This message is intended to indicate that the exchange has started its opening process.   | 9:30:00am        |
| "N"        | End of Normal Hours Processing. This message is intended to indicate that the exchange will no longer accept any new orders or changes to existing orders for options that trade during normal hours. | 4:00:00pm        |
| "L"        | End of Late Hours Processing. This message is intended to indicate that the exchange will no longer accept any new orders or changes to existing orders for options that trade during extended hours. | 4:15:00pm        |
| "E"        | End of System Hours. This message indicates that the system is now closed.  | ~5:30pm          |
| "C"        | End of Messages. This is always the last message sent in any trading day.   | ~5:35pm          |
| "W"        | End of WCO Early closing. (PHLX only) This message is intended to indicate that the exchange will no longer accept any new orders or changes to existing Orders on last trading date of WCO options.  | 12:00 Noon       |

## 5.2. Options Directory

At the start of each trading day, the exchange disseminates directory messages for all symbols trading on a given ring.

| Name                           | Offset | Size | Value         | Notes  |
|--------------------------------|--------|------|---------------|--|
| Message type                   | 0      | 1    | "D"           | Options directory message  |
| Seconds                        | 1      | 4    | Integer       | Seconds portion of timestamp   |
| Nanoseconds                    | 5      | 4    | Integer       | Nanoseconds portion of timestamp   |
| Version                        | 9      | 1    | Integer       | CTI version (currently set to 21)  |
| Option id                      | 10     | 4    | Integer       | Option id assigned by exchange daily   |
| Security symbol                | 14     | 5    | Alpha Numeric | Option "root" symbol   |
| Expiration year, month and day | 19     | 2    | Integer       | Expiration date of the option:<br>Bits 0-6 = Year (0-99)<br>Bits 7-10 = Month (1-12)<br>Bits 11-15 = Day (1-31)<br>Bit 15 is least significant bit |
| Strike price                   | 21     | 4    | Integer       | Strike price of the option (see Messages section for field processing)   |
| Option kind                    | 25     | 1    | Alpha         | "C" = Call<br>"P" = Put  |
| Source                         | 26     | 1    | Integer       | Connection source:<br>0 = Away trade Connection<br>1-N = Local trade connection  |

| Name                | Offset | Size | Value   | Notes  |
|---------------------|--------|------|---------|--|
| Option closing type | 40     | 1    | Alpha   | "N" = Normal hours<br>"L" = Late hours<br>"W" = WCO Early Closing at 12:00 Noon (PHLX Only)  |
| MPV                 | 42     | 1    | Alpha   | Minimum Price Variation for this option. See Notes below for further explanation:<br>"E" = penny Everywhere<br>"S" = Scaled<br>"P" = penny Pilot |
| Closing Only        | 43     | 1    | Alpha   | "Y" = Option is Closing Position Only. Only MM origin orders can have open position in the series.<br>"N" = Option is not Closing Position Only. |
| Contract Size       | 44     | 4    | Integer | Underlying Deliverable size  |

NOTE: The options directory messages are sent once per symbol, typically before the "Start of System Hours" System Event. Should it be necessary, intra-day updates to this message will be sent as they occur.

The Minimum Price Variation (MPV) has the following values:

- "E" – All prices are in penny increments
- "S" – Prices below \$3.00 are in increments of \$0.05, prices above \$3.00 are in increments of \$0.10
- "P" – Prices below \$3.00 are in increments of \$0.01, prices above \$3.00 are in increments of \$0.05

### 5.3. Complex Order Strategy (Specific to ISE/MRX only)

This is the strategy associated to a complex order. The Strategy ID assigned for a new complex strategy is unique for a particular complex instrument for a trading session however Strategy IDs are independent of session Option IDs and uniqueness of the IDs across both complex and simple options is not guaranteed.

| Name           | Offset | Size | Value   | Notes   |
|----------------|--------|------|---------|---|
| Message type   | 0      | 1    | "R"     | Complex order strategy message  |
| Seconds        | 1      | 4    | Integer | Seconds portion of timestamp  |
| Nanoseconds    | 5      | 4    | Integer | Nanoseconds portion of timestamp  |
| Version        | 9      | 1    | Integer | CTI version (currently set to 21)   |
| Strategy id    | 10     | 4    | Integer | Strategy id assigned daily  |
| Source         | 14     | 1    | Integer | Source of the strategy assigned daily: 1-N = Local trade connection #1-N  |
| Action         | 28     | 1    | Alpha   | State of the strategy:<br>"A" = Add<br>"D" = Delete   |
| Number of legs | 29     | 1    | Integer | Number of legs in the strategy<br>NOTE: Leg field offsets below are an equation, where "n" is the zero based leg number (0, 1, ...) |

| Name  | Offset                         | Size     | Value | Notes         |   |
|---|--------------------------------|----------|-------|---------------|---|
| Leg information, legs repeated. n = 0, 1, ... | Option id                      | 21n + 30 | 4     | Integer       | Option id for this leg (matches with id in the options directory message). Zero for stock leg   |
|   | Security symbol                | 21n + 34 | 5     | Alpha Numeric | Option "root" symbol. Blank for a stock leg (use underlying symbol instead)   |
|   | Expiration year, month and day | 21n + 39 | 2     | Integer       | Expiration date of the option:<br>Bits 0-6 = Year (0-99)<br>Bits 7-10 = Month (1-12)<br>Bits 11-15 = Day (1-31)<br>Bit 15 is least significant bit<br>Zero for stock leg. |
|   | Strike price                   | 21n + 41 | 4     | Integer       | Strike price of the option (see Messages section for field processing). Zero for stock leg.   |
|   | Option kind                    | 21n + 45 | 1     | Alpha         | "C" = Call<br>"P" = Put<br>" "(space) = Stock leg   |
|   | Side                           | 21n + 46 | 1     | Alpha         | "B" = Leg is on buy side<br>"S" = Leg is on sell side   |
|   | Leg ratio                      | 21n + 47 | 4     | Integer       | Strategy leg ratio  |

## 5.4. Security Trading Action

This administrative message indicates the current trading status of an option within the exchange.

The exchange will send out a Trading Action message with the "T" (Trading resumed) for all options that are eligible for trading at the start of the Options Market system hours. If a security is absent from the pre-opening Trading Action spin, firms should assume that the security is being treated as halted at the start of the system hours.

| Name                           | Offset | Size | Value         | Notes  |
|--------------------------------|--------|------|---------------|--|
| Message type                   | 0      | 1    | "H"           | Trading action message   |
| Seconds                        | 1      | 4    | Integer       | Seconds portion of timestamp   |
| Nanoseconds                    | 5      | 4    | Integer       | Nanoseconds portion of timestamp   |
| Version                        | 9      | 1    | Integer       | CTI version (currently set to 21)  |
| Option id                      | 10     | 4    | Integer       | Option id assigned by exchange daily   |
| Security symbol                | 14     | 5    | Alpha Numeric | Option "root" symbol   |
| Expiration year, month and day | 19     | 2    | Integer       | Expiration date of the option:<br>Bits 0-6 = Year (0-99)<br>Bits 7-10 = Month (1-12)<br>Bits 11-15 = Day (1-31)<br>Bit 15 is least significant bit |
| Strike price                   | 21     | 4    | Integer       | Strike price of the option (see Messages section for field processing)   |
| Option kind                    | 25     | 1    | Alpha         | "C" = Call<br>"P" = Put  |
| Current trading state          | 26     | 1    | Alpha         | Current trading state for the option on the exchange:<br>"H" = Halt in effect<br>"T" = Trading resumed   |

## 5.5. Complex Trading Action (Specific to ISE/MRX only)

This administrative message indicates the current trading status of a strategy within the exchange.

The exchange will send out a Strategy Trading Action message with the "T" (Trading Resumed) for all strategies that are eligible for trading at the start of the Options Market system hours. If a strategy is absent from the pre-opening Trading Action spin, firms should assume that the strategy is being treated as halted at the start of the system hours.

| Name                  | Offset | Size | Value   | Notes  |
|-----------------------|--------|------|---------|--|
| Message type          | 0      | 1    | "I"     | Strategy trading action message  |
| Seconds               | 1      | 4    | Integer | Seconds portion of timestamp   |
| Nanoseconds           | 5      | 4    | Integer | Nanoseconds portion of timestamp   |
| Version               | 9      | 1    | Integer | CTI version (currently set to 21)  |
| Strategy id           | 10     | 4    | Integer | Strategy id assigned daily   |
| Current trading state | 14     | 1    | Alpha   | Current trading state for the strategy on the exchange:<br>"H" = Halt in effect<br>"T" = Trading resumed |

## 5.6. Trade

The exchange sends trades and corrections using this message. Trade cancels can be delivered using this message too if configured on the firm's request but by default CTI sends cancels using different message type (see Trade Cancels section below). Note that CTI trades differ from executions sent on FIX, SQF, or OTTO interface. Executions concern only with price and total volume traded while clearing trades have to provide information about contra sides. FIX, SQF and OTTO users will get execution information about their side only whereas CTI users will get the execution along with contra side information.

Each field has an indicator on the right side specifying if the field is populated for a specific exchange. Following code is used to denote each of the exchanges where CTI is available.

| Exchange | Code |
|----------|------|
| PHLX     | X    |
| NOM      | Q    |
| BX       | T    |
| ISE      | I    |
| GEMX     | H    |
| MRX      | J    |

| Name         | Offset | Size | Value   | Notes   | X | Q | T | I | H | J |
|--------------|--------|------|---------|---|---|---|---|---|---|---|
| Message type | 0      | 1    | "T"     | Trade message   | . | . | . | . | . | . |
| Seconds      | 1      | 4    | Integer | Seconds portion of trade time   | . | . | . | . | . | . |
| Nanoseconds  | 5      | 4    | Integer | Nanoseconds portion of trade time   | . | . | . | . | . | . |
| Version      | 9      | 1    | Integer | Currently set to 21   | . | . | . | . | . | . |
| Send type    | 10     | 1    | Alpha   | "S" = Send (original transmission)<br>"P" = Possible duplicate (unsolicited retransmission) | . | . | . | . | . | . |

### Symbol Information

|                   |    |    |               |   |   |   |   |   |   |   |
|-------------------|----|----|---------------|---|---|---|---|---|---|---|
| Option id         | 11 | 4  | Integer       | Option id assigned by exchange daily. Zero for stock leg. | . | . | . | . | . | . |
| Underlying symbol | 15 | 13 | Alpha         | Underlying stock symbol (left justified, space filled)    | . | . | . | . | . | . |
| Security symbol   | 28 | 5  | Alpha numeric | Option "root" symbol. Blank for stock leg.                | . | . | . | . | . | . |

| Name                           | Offset | Size | Value   | Notes  | X | Q | T | I | H | J |
|--------------------------------|--------|------|---------|--|---|---|---|---|---|---|
| Expiration year, month and day | 33     | 2    | Integer | Expiration date of the option:<br>Bits 0-6 = Year (0-99)<br>Bits 7-10 = Month (1-12)<br>Bits 11-15 = Day (1-31)<br>Bit 15 is least significant bit.<br>Zero for stock leg.   | . | . | . | . | . | . |
| Strike price                   | 35     | 4    | Integer | Strike price of the option (see Messages section for field processing). Zero for stock leg.  | . | . | . | . | . | . |
| Option kind                    | 39     | 1    | Alpha   | "C" = Call<br>"P" = Put<br>" "(space) = Stock leg  | . | . | . | . | . | . |

## Notes:

1. A trade (buy or sell) is considered automatic when it is assigned by the electronic matching engine else it is a manual trade. Examples: a quote matches with a resting order – both sides are automatic, an order sent from FBMS to the matching engine trades with a resting quote – both sides are automatic, two orders matched inside of FBMS outside of the matching engine – both sides are manual.
2. Assumptions about the contents of reserved fields are not recommended. They can be zero, spaces, or any other values.
3. XL has alternative names for capacity:
4. Registered Market Maker = On-Floor Market Maker,
5. Away Market Maker = On-Floor Market Maker Off-Floor, and Non-registered Market Maker = Off-Floor Market Maker.
6. Multi Account in XL will store Market Maker badge (house+suffix) for On-Floor Market Maker orders with CMTA.
7. FOK orders will be returned with TIF = IOC

## 5.7. Cancel Trade

By default CTI sends trade cancels using this message. The alternative is to request configuring CTI for a given firm and connection block to send “extended” cancels with all the trade information using Trade message (described above) with transactionType set to Z.

| Name                           | Offset | Length | Value        | Notes  |
|--------------------------------|--------|--------|--------------|--|
| Message Type                   | 0      | 1      | “V”          | Cancel trade message   |
| Seconds                        | 1      | 4      | Integer      | Seconds portion of cancel time   |
| Nanoseconds                    | 5      | 4      | Integer      | Nanoseconds portion of cancel time   |
| Version                        | 9      | 1      | Integer      | CTI version (currently set to 21)  |
| Send type                      | 10     | 1      | Alpha        | “S” = Send (original transmission)<br>“P” = Possible duplicate (unsolicited retransmission)  |
| Option id                      | 11     | 4      | Integer      | Option id assigned by exchange daily. Zero for stock leg.  |
| Underlying symbol              | 15     | 13     | Alpha        | Underlying stock symbol (left justified, space filled)   |
| Security symbol                | 28     | 5      | Alphanumeric | Option “root” symbol. Blank for stock leg.   |
| Expiration year, month and day | 33     | 2      | Integer      | Expiration date of the option: Bits<br>0-6 = Year (0-99)<br>Bits 7-10 = Month (1-12)<br>Bits 11-15 = Day (1-31)<br>Bit 15 is least significant bit.<br>Zero for stock leg. |
| Strike price                   | 35     | 4      | Integer      | Strike price of the option (see Data Types for field processing).<br>Zero for stock leg.   |
| Trade id                       | 40     | 4      | Integer      | Clearing trade Id  |
| Cross id                       | 46     | 4      | Integer      | Trade Group Id. Ties together all clearing trades of a given atomic transaction in the matching engine.  |
| Match ID                       | 51     | 4      | Integer      | Execution Id of the trade being cancelled  |

## 6. Liquidity Codes

| Code | Description                          | X | Q | T | I | H | J |
|------|--------------------------------------|---|---|---|---|---|---|
| 1    | Add/Maker                            |   |   | • |   |   |   |
| 2    | Remove/Taker                         |   |   | • |   |   |   |
| 4    | Response                             |   |   | • |   |   |   |
| 5    | Hidden                               |   |   | • |   |   |   |
| 6    | Opening Trade                        |   |   | • |   |   |   |
| 7    | Cross                                |   |   | • |   |   |   |
| 8    | Flashed Order                        |   |   | • |   |   |   |
| 9    | Flash Response                       |   |   | • |   |   |   |
| 10   | Routed Out                           |   |   | • |   |   |   |
| 11   | Trade Report                         |   |   | • |   |   |   |
| 12   | Combo Maker Against Combo            |   |   | • |   |   |   |
| 13   | Combo Taker Against Comb             |   |   |   |   |   |   |
| 14   | Combo Response Against Combo         |   |   | • |   |   |   |
| 15   | Combo Hidden Against Comb            |   |   |   |   |   |   |
| 16   | Combo Opening Rotation               |   |   | • |   |   |   |
| 17   | Combo Cross                          |   |   | • |   |   |   |
| 18   | Combo Taker Against Regular          |   |   | • |   |   |   |

| 57   | Simple Exposure Order – Responder      | • |   |   |   |   |   |

## 7. Examples

### 7.1. Ref Trade Id and Correction Number in Trade message

As part of a transaction in the trading system, participant B buys 100 contracts from participant S:

CTI sends a clearing trade to both participants with a new tradeld (let's say 5) and correctionNumber 0. Since this completely new trade (#5/0) doesn't refer to any prior trades, refTradeld and refCorrectionNumber in trade messages for buyer and seller are both set to 0.

Later back office changes the trade #5/0 taking 70 contracts from seller S and assigning them to another seller (let's say participant S2). The buyer stays the same:

CTI sends a corrected trade (transactionType field is set to Y "Trade Correction") to buyer B and seller S for 30 contracts with unchanged tradeld (5) and correctionNumber incremented by 1 (0+1=1). refTradeld and refCorrectionNumber in messages for this trade #5/1 are set to refer to prior trade #5/0.

Also as part of the change to the trade #5/0, CTI sends a new trade (transactionType X "new trade") to buyer B and seller S2 for 70 contracts with new tradeld (let's say 6) and correctionNumber 0. refTradeld and refCorrectionNumber in messages for this trade #6/0 are set to refer to prior trade #5/0.

If back office changes the trade #5/1 further taking 10 more contracts from seller S and assigning them to another seller (let's say participant S3 this time) with the same buyer:

CTI will send a corrected trade (transactionType field is set to Y "Trade Correction") to buyer B and seller S for 20 contracts with unchanged tradeld (5) and correctionNumber incremented by 1 (1+1=2). refTradeld and refCorrectionNumber in messages for this trade #5/2 are set to refer to prior trade #5/1.

Also as part of the change to the trade #5/1, CTI will send a new trade (transactionType X "new trade") to buyer B and seller S3 for 10 contracts with new tradeld (let's say 7) and correctionNumber 0. refTradeld and refCorrectionNumber in messages for this trade #7/0 are set to refer to trade #5/1.

## 7.2. sideChanged in Trade message

After participant B buys 100 contracts from participant S:

CTI sends a clearing trade to both participants with sideChanged set to Y(es).

If later back office changes price of the trade:

CTI will send a corrected trade (transactionType field set to Y "Trade Correction") to both participants with sideChanged set to Y(es)

Later back office changes the trade re-assigning all contracts on the sell side from participant S to participant S2 and keeping the same buyer:

CTI sends a corrected trade (transactionType = "Trade Correction") to buyer B with sideChanged set to N(o) because all that changed for the buyer is a contra side. Participant S gets a trade cancel, and participant S2 gets a new trade with sideChanged set to Y(es).

If later back office splits the sell side between existing seller S2 and 5 more sellers keeping the same buyer:

CTI will send 6 corrected trades to buyer B with sideChanged set to N(o) because total contracts didn't change (only contra side). Participant S2 gets a trade correction too but his sideChanged will be Y(es) because the seller's contracts got reduced. All other new sellers will get new trades with sideChanged set to Y(es).

## 8. Support

## 9. Appendix A – Revision Control Log

### January 23, 2024: Clearing Trade Interface 2.2

- Adding MIAX Sapphire enumeration as “S” to Origin and Execution market

### June 14, 2023: GEMX Replatform

- Adding MEMX spec updates to Security Exchange, Last Mkt, Liquidity Flag, Execution Mkt and Origin Mkt.

### March 31, 2023: GEMX Replatform

- November 2023 GEMX to adopt CTI version 2.2 during the Replatform that is scheduled to complete November 13, 2023

### November 7, 2022 Clearing Trade Interface 2.2

- Introducing new liquidity codes to MRX only upon replatform, backward compatible with 2.1
- Clarifying the version field in all messages (Added: 11/3/2022)

### July 13, 2017 Clearing Trade Interface (CTI) 2.1

- Adjusting Origin Type enumeration for “OTTO Complex” to “Z” and “OTTO Sweep” to “E” (as it exists on NOM currently) in Trade Message (Section 5.6)

### April 19, 2017 Clearing Trade Interface (CTI) 2.1

- Adjusting Origin Type enumeration for “Block Response” to “X” in Trade Message (Section 5.6)

### March 8, 2017 Clearing Trade Interface (CTI) 2.1

Changes:

- Adjusting Origin Type enumeration for “Block Response” to “W” in Trade Message (Section 5.6)
- Adjusting Origin Type description for Enumeration “E” to “OTTO Complex Order”
- Adjust Version in System Event Message to “21” representing 2.1
- Clarifying SoupBin TCP version 3.0
- Correcting Trade Message Offsets
- Clarifying Trade prices are long fields and other prices are integer

### January 13, 2017 Clearing Trade Interface (CTI) 2.1

Changes:

- Adjusting enumeration to “F” for System Event Start of Currency Opening Process
- Adding MIAX Pearl enumeration as “P” to Execution market

### Dec 16, 2016 Clearing Trade Interface (CTI) 2.1

Changes:

- Adjusting enumeration to “E” for Proprietary Customer, “B” for Broker Dealer – Customer, “R” for retail and “K” for Broker Dealer – Firm in Trade Message

### **Nov 18, 2016: Clearing Trade Interface (CTI) – Version 2.1**

Changes:

- Adding System Event code for “Start of Currency Opening Process”
- Fill or Kill orders will have TimeInForce = IOC
- Changing liquidity codes from Alpha to Numeric data type
- OrderID will be BranchSequence Number if provided for FIX Orders
- Adding Block/Facilitation to OriginType

### **Sep 13, 2016: Clearing Trade Interface (CTI) – Version 2.0**

Changes:

- New Messaging with support for NASDAQ ISE, GEMX and MRX exchanges.

### **Feb 24, 2016: Clearing Trade Interface (CTI) – Version 1.3**

Changes:

- Changed Start Of Messages Event time from 6:00am to 4:00am.

### **Feb 01, 2016: Clearing Trade Interface (CTI) – Version 1.3**

Changes:

- Added ISE MERCURY Exchange Code (J) to Execution Market and Origin Market.

### **Sep 30, 2015: Clearing Trade Interface (CTI) – Version 1.3**

Changes:

- Added BATS EDGX Exchange Code (E) to Execution Market and Origin Market.

### **Aug 10, 2015: Clearing Trade Interface (CTI) – Version 1.3**

Changes:

- Added WCO Early Close Time 'W' for option directory message.
- Added WCO Early Close Time 'W' for System Event message.

### **May 27, 2015: Clearing Trade Interface (CTI) - Version 1.3**

Changes:

- Added Auction Type, Auction ID and ClearingFlags to BX Options Market for PRISM Cross.

### **Mar 02, 2015: Clearing Trade Interface (CTI) - Version 1.3**

Changes:

- Added explanation about strategy ID in section 5.3 (Complex Order Strategy).

### **Mar 19, 2014: Clearing Trade Interface (CTI) - Version 1.3**

Changes:

- Added Capacity 'J' for Joint Back Office (JBO) Orders.
- Added Executing and Origin Market Code 'H' for ISE Gemini exchange.

### **Jan 29, 2013: Clearing Trade Interface (CTI) - Version 1.3**

Changes:

- Added Liquidity Codes for Order Exposure Alert (Flash Trade).
- Explained that new Alpha-Numeric liquidity codes may be added in future without any notice.

### **Nov 9, 2012: Clearing Trade Interface (CTI) - Version 1.3**

Changes:

- Added Executing Market Code (“M”) for Miami Stock Exchange (MIAX).

### **July 20, 2012: Clearing Trade Interface (CTI) - Version 1.3**

Changes:

- Added Auction Type and Origin Type values for
  - Simple Order Solicitation
  - Complex Order PIXL
  - Complex Order Solicitation

### **May 21, 2012: Clearing Trade Interface (CTI) - Version 1.3**

Changes:

- Added Contra Capacity To NOM.
- Explained when the following fields can be blank or 0
  - Origin market
  - Order Date
  - Short Sell Indicator.

### **March 23, 2012: Clearing Trade Interface (CTI) - Version 1.3**

Changes:

- Added NASDAQ OMX BX Options Market.
- Reversed Revision Control Log (this Appendix) to have the latest change at the top.

### **October 19, 2011: Clearing Trade Interface (CTI) - Version 1.3**

Changes:

- New version with support for Real Time Billing.

### **April 4, 2011 Clearing Trade Interface (CTI) - Version 1.2**

Changes in Trade Message:

- Added “QCC Primary” and “QCC Contra” as possible values in “Origin Type” field

### **December 8, 2010: Clearing Trade Interface (CTI) - Version 1.2**

Changes:

- Made one document for NASDAQ Options Market (NOM) and NASDAQ PHLX Options Market (XL).
- Trade messages changes:
  - Increased Account from 10 bytes to 32
  - Added “Opening Trade” to Liquidity field
  - Added “Opening Trade Customer to Customer” to Liquidity field

- Added “Away Market Maker” and “Non-Registered Market Maker” to “Capacity” field
- Added “OTTO Order” and “OTTO Sweep” to “Origin Type” field

#### **October 18, 2010: Clearing Trade Interface (CTI) - Version 1.1**

Changes:

- Added explanation for Give-Up CMTA and MM-Acronym fields for new On-Floor Market Maker order with CMTA (Fix tag 204=9).
- Populate contents of Match ID in the Trade message for corrections. Updated the notes content of the Match ID field in the trade message to denote that the field will now be populated for corrections.

#### **September 17, 2010: Clearing Trade Interface (CTI) - Version 1.1**

Changes:

- Added Origin Type to Trade Messages
- Added a comment to the ‘Strategy id’ and ‘Strategy Leg’ Field Notes

Changes:

- Added an option of sending trade cancels using trade messages

#### **May 13, 2010: Clearing Trade Interface (CTI) - Version 1.1**

Changes:

- Changed Architecture section
  - Away trade corrections and cancels are not sent on “Away Trades” line. They come down on one of the trade lines based on the underlying assignment.
  - In Overview mentioned that administrative and market event messages are optional
  - Added failover section
- Added Subscription section
- Changed Version field in System Event message to 11
- Added MatchId field to Trade Message
- Added reserved fields to Trade Message
- Added Supplementary Id field to Trade Message (order info section)
- Added Order Indicators to Trade Message (with FBMS order indicator)
- Changed many notes for trade message fields
- Added notes after Trade message
- Added example section

#### **April 21, 2010: Clearing Trade Interface (CTI) - Version 1.0**

Initial Release.
