

Nasdaq Nordic Co-location Services

Nasdaq offers all customers the opportunity to co-locate their servers and equipment within the Nasdaq Data Center, providing proximity to the speed and liquidity of all of our Nordic markets.

Through co-location, trading participants, vendors and service providers are able to reduce latency and network complexity by utilizing high density cabinets and a single hand-off for all Nasdaq Nordic markets. Nasdaq offer a wide variety of connectivity options and market data to fit your firm's specific network and trading strategy needs.

As the leader in trading and data technology for the financial industry, Nasdaq has pioneered a Co-location program that provides:

- Ultra-low latency connectivity to Nasdaq's trading systems
- A state-of-the-art environmental friendly energy efficient data center facility
- A highly secure and access-controlled environment
- All necessary power including redundant generator systems
- Sufficient cooling and cabinet space
- Onsite technical support from Nasdaq's highly trained staff
- A range of value-added services and special request services are offered
- Diverse choice of telco and extranet providers

Cabinets

Nasdaq offers a range of flexible cabinet options from single U space to full cabinets providing 15kVA. Cabinets used are 800 x 1200mm Chatsworth Products (CPI) GF-Series GlobalFrame® Gen 2.

Connectivity

Clients can choose from 1G to 10G connectivity to Nasdaq. The exchange cross connects (aka handoffs) can be used to send orders and/or receive market data from/to your co-located cabinet. Nasdaq applies equal distance cabling and is following the EN 50600 availability class 4 or the US equivalent TIA942 tier IV installation philosophy which gives the highest redundancy. External connectivity can be arranged with a number of different connectivity providers. List of current providers can be found on the Nasdaq technical website. Clients also have the opportunity to connect to other clients or service providers within the data center offering a range of services.

Remote Hands

The Nasdaq remote hands team can be your extended hands and eyes on site to perform a wide range of remote management and troubleshooting tasks to keep your business up and running. Clients can simply request help by the hour or subscribe to different service programs each providing a set of services at a fixed price.

Add on Services

Nasdaq offer a range of value added services for its co-located clients including access to Internet, GPS for time synchronization, Connectivity to other data centers and much more.
