

# Genium INET Nordic Dedicated Gateway Service

**Take advantage of accessing the Nasdaq Nordic marketplaces via a dedicated gateway. Nasdaq provides firms with the unique opportunity to access liquidity of the Nordic marketplaces via a dedicated gateway that is not shared with other firms and therefore avoid the potential impact of other firms trading activity.**

## About the Offering

Available on Genium INET for both OMnet and FIX connections. Nasdaq Nordic offers all customers the opportunity to access the market by connecting via a production gateway dedicated uniquely to your firm and avoid the potential impact of other firms trading activity. Customers subscribing to this service will be granted exclusive use of a production gateway subject to the same service levels as any other production gateway. This service is primarily designed for firms engaged in high frequency trading where low latency is of outmost importance and is available for both co-located and extranet customers.

## Genium INET OMnet and FIX

Two ports will be made available on each gateway and for optimal performances it is recommended that:

- one port is dedicated to inbound traffic (orders and quotes)
- one port for the outbound traffic (market data)
- a maximum of 50 users per dedicated gateway is allowed

## Performance

By connecting to Genium INET via a dedicated gateway, in addition to deterministic latency customers will benefit from a latency reduction compared to a shared gateway of approximately 40  $\mu$ s on average.

## Fail-over redundancy

- For intra-site fail-over: customers can rely on ordinary shared gateways or request an additional dedicated gateway on the primary site
- For inter-site fail-over: customers can rely on existing shared gateways on the secondary site

Existing co-location customers may place orders using the CoLo and Connectivity Console. Please refer to the Nasdaq Nordic Technical Price List for install and monthly fee rates.
